September 2014

## An Invitation to "Lunch and Learn"

KCS Corporation offers "Lunch and Learn" sessions for companies wishing to learn more about Photo Simulations and Renderings using Digital Modeling. Our presentation will demonstrate how Photo Simulations and 3D Renderings can show how a structure will visually impact a site prior to zoning and construction. Our Architects create Digital Models which accurately represent all the forms, colors, and textures that will appear on the structure.

Representatives from KCS Corporation will come to your offices and will cater lunch. After our short presentation, you will see how utilizing Digital Modeling enables property owners, municipalities, and clients to envision a project in a way not previously possible with the use of simple line drawings. This enhances the process of obtaining zoning board and other approvals to save your project time and expense.

Contact John Frank at [j.frank@kcscorp.com](mailto:j.frank@kcscorp.com) or (847) 490-8200 to schedule a session for your employees!

For additional Photo Simulation samples, visit [www.kcscorp.com](http://www.kcscorp.com)

## Solar Plant Design & Construction completed

KCS Corporation completed the design and construction support of a 1 MW solar plant located in Southern Wisconsin. The design work included Geotechnical Investigations, Civil Engineering, DNR Permitting, Foundation design, and construction support throughout the project.

For further information, contact us at [m.sethi@kcscorp.com](mailto:m.sethi@kcscorp.com) or (847) 490-8200 to discuss how we can support your project.

## Engineering Services of Unmatched Value

Responsive   Innovative   Experienced   Cost Effective
